More than 32,000 Certified Nursing Aides voluntarily participated in this survey. Without their efforts the work of the center would not be possible. The Department of Health Professions, the Healthcare Workforce Data Center, and the Board of Nursing express our sincerest appreciation for your ongoing cooperation.

Thank You!

32,289 Certified Nurse Aides (CNAs) voluntarily took part in the 2014 Certified Nurse Aide Workforce Survey. The Virginia Department of Health Professions' Healthcare Workforce Data Center (HWDC) administers the survey during the license renewal process, which takes place every year on the license issuance month of each respondent. These survey respondents represent 52% of the 61,574 CNAs who are licensed in the state and 83% of renewing practitioners.

The HWDC estimates that 53,395 CNAs participated in Virginia's workforce during the survey period, which is defined as those who worked at least a portion of the year in the state or who live in the state and intend to return to work as a CNA at some point in the future. Between October 2013 and September 2014, Virginia's CNA workforce provided 45,077 "full-time equivalency units", which the HWDC defines simply as working 2,000 hours a year (or 40 hours per week for 50 weeks with 2 weeks off).

94% of all CNAs are female, while the median age of all CNAs is 39. In a random encounter between two CNAs, there is a 58% chance that they would be of different races or ethnicities, a measure known as the diversity index. This makes Virginia's CNA workforce more diverse than the state's overall population, where there is a 54% chance that two randomly chosen people would be of different races or ethnicities. Among CNAs who are under the age of 40, the diversity index increases slightly to 59%.

Nearly half of all CNAs grew up in a rural area, and 29% of these professionals currently work in non-Metro areas of the state. Overall, 19% of all CNAs work in rural areas of the state. Meanwhile, two-thirds of Virginia's CNAs graduated from high school in Virginia, and 86% of CNAs earned their initial professional degree in the state. In total, 88% of Virginia's CNA workforce has some educational background in the state.

In addition to a CNA certificate, 6% of Virginia's CNA workforce also holds a certificate as a Registered Medication Aide (RMA), while 1% are certified as Advanced Practice CNAs. In addition, 10% of all CNAs are currently pursuing additional educational opportunities by enrolling in either a RN or LPN nursing program.

84% of CNAs are currently employed in the profession, but nearly 10% of CNAs are currently unemployed. 56% of all CNAs hold one full-time position, while 16% hold multiple positions simultaneously. 34% of CNAs work between 40 and 49 hours per week, while just 4% of CNAs work at least 60 hours per week. In addition, 45% of CNAs have been at their primary work location for more than two years, while 40% began work in a new location at some point in the past year.

The typical CNA earns between \$11.00 and \$12.00 per hour at their primary work location. In addition, 70% of all CNAs receive at least one employer-sponsored benefit, including 47% who receive health insurance. 91% of CNAs are satisfied with their current employment situation, including 63% who indicate they are "very satisfied".

94% of all CNAs fill primarily a clinical or patient care role at their primary work location. Approximately one-third of all CNAs work at a nursing home at their primary work location, the most of any establishment type among CNAs. Meanwhile, 19% of all CNAs are employed by home health care establishments at their primary work location, and 13% work at assisted living facilities.

Definitions

- 1. The Survey Period:** The survey was conducted in between October 2013 and September 2014 on the month of initial licensure of each renewing practitioner.
- 2. Target Population:** All CNAs who held a Virginia license at some point during the survey time period.
- 3. Survey Population:** The survey was available to CNAs who renewed their licenses online. It was not available to those who did not renew, including CNAs newly licensed in the past two years.

¹ Although the survey is conducted annually, new licensees do not have to renew their license for two years.

Definitions

- 1. Virginia's Workforce:** A licensee with a primary or secondary work site in Virginia at any time during the survey timeframe or who indicated intent to return to Virginia's workforce at any point in the future.
- 2. Full Time Equivalency Unit (FTE):** The HWDC uses 2,000 (40 hours for 50 weeks) as its baseline measure for FTEs.
- 3. Licensees in VA Workforce:** The proportion of licensees in Virginia's Workforce.
- 4. Licensees per FTE:** An indication of the number of licensees needed to create 1 FTE. Higher numbers indicate lower licensee participation.
- 5. Workers per FTE:** An indication of the number of workers in Virginia's workforce needed to create 1 FTE. Higher numbers indicate lower utilization of available workers.

This report uses weighting to estimate the figures in this report. Unless otherwise noted, figures refer to the Virginia Workforce only. For more information on HWDC's methodology visit:

FTEs

Total: 45,077
 FTEs/1,000 Residents: 5.457
 Average: 0.93

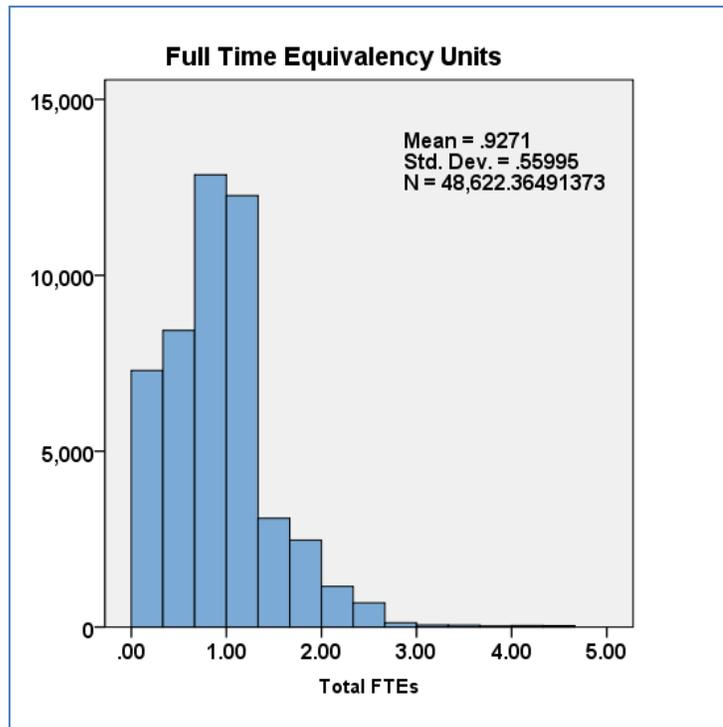

Age & Gender Effect

Age, Partial Eta²: Negligible
 Gender, Partial Eta²: Negligible

Partial Eta² Explained:
 Partial Eta² is a statistical measure of effect size.

A Closer Look:

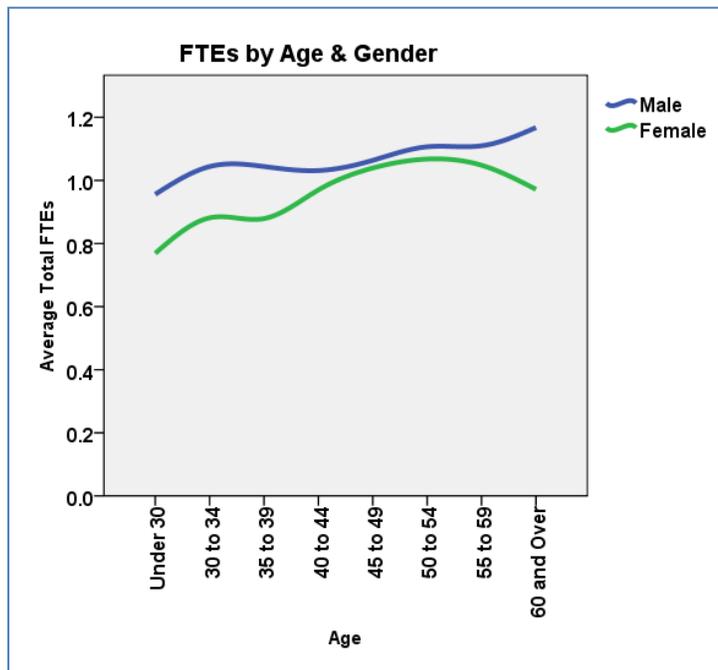

Source: Va. Healthcare Workforce Data Center

The typical (median) CNA provided 0.91 FTEs, or approximately 35 hours per week for 52 weeks. Although FTEs appear to vary by age and gender, statistical tests did not verify a difference exists.³

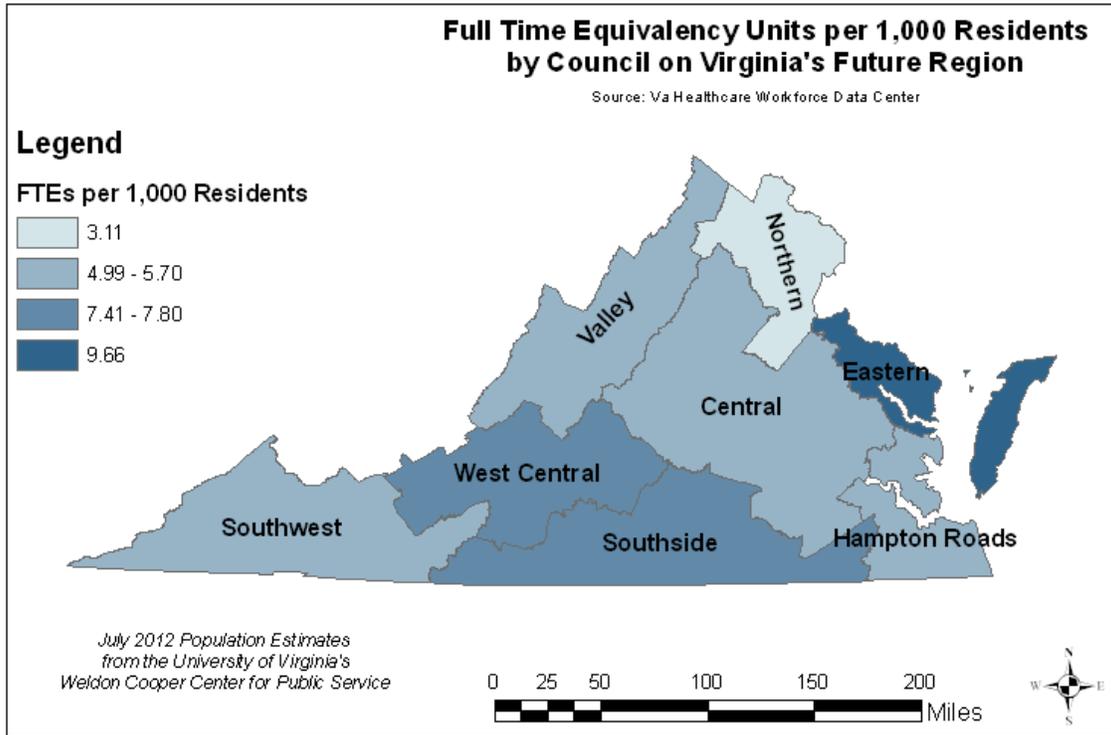

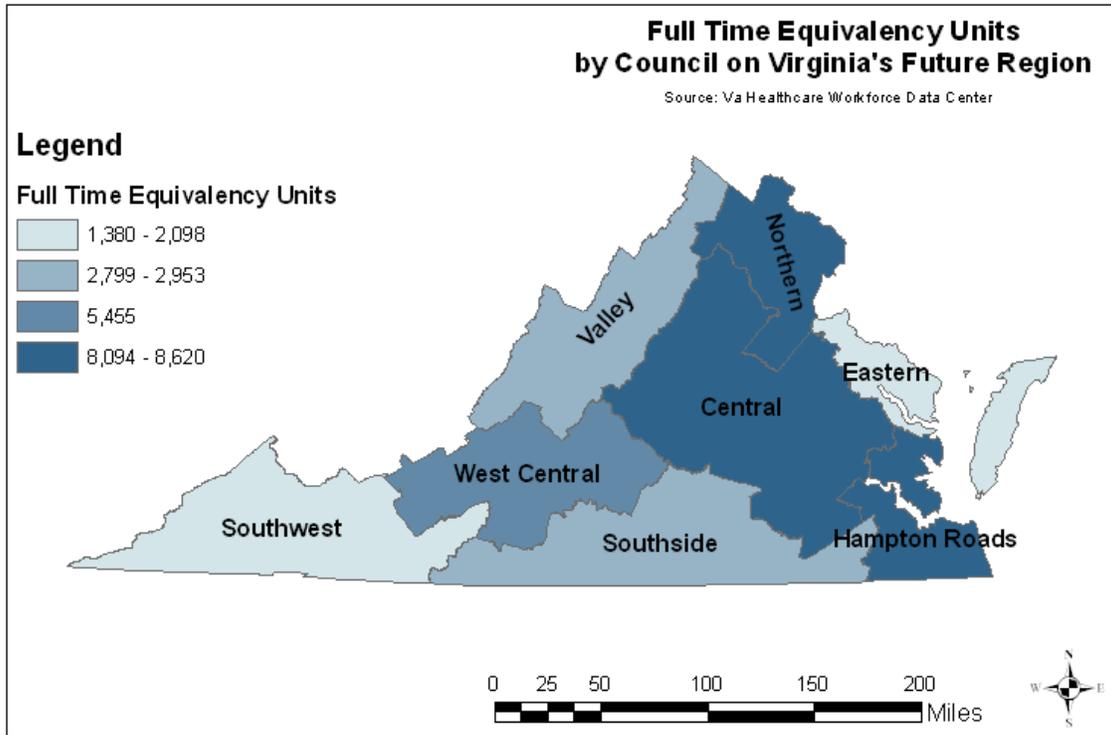

Full-Time Equivalency Units		
Age	Average	Median
Age		
Under 30	0.78	0.77
30 to 34	0.89	0.89
35 to 39	0.89	0.88
40 to 44	0.97	0.91
45 to 49	1.04	1.03
50 to 54	1.07	1.08
55 to 59	1.05	1.08
60 and Over	0.98	0.91
Gender		
Male	1.05	1.01
Female	0.92	0.91

See the Methods section on the HWDC website for details on HWDC Methods: www.dhp.virginia.gov/hwdc/

Final weights are calculated by multiplying the two weights and the overall response rate:

$$\text{Age Weight} \times \text{Rural Weight} \times \text{Response Rate} = \text{Final Weight.}$$

Overall Response Rate: 0.524393
